Dear Larry,

I would appreciate a reprint of your paper in J. Neurobiol. 3:111, 1972. I enjoyed (and admired!) a xero-preprint, but would like to see the figures better.

Do you have any more on the circuiting? Will you keep me on a regular mailing list?

As ever,

Joshua Lederberg
Professor of Genetics

P.S. What a lot of information could be stored in the reticulation of a single cyton! Is that an old idea? Have you started to tech your cultures? Induced changes in the reticulation patterns and/or electrical properties of isolated cells, if they occur, would of course be much easier to analyze than those involving complex intercellular interconnections.
